INSTRUCTIONS FOR USE

ABSTRACTS OF ENTOMOLOGY is a compilation of stracts and reference citations to insect and arachnid pers derived from two parent publications, BIOLOGICAL 3STRACTS and BIORESEARCH INDEX. The Subject dex consists of permuted, keyword supplemented titles om both sources. Titles followed by numbers with the prefix denote abstracts or reference citations from BIOLOGICAL BSTRACTS; those followed by a number with the prefix represent reference citations from BIORESEARCH INDEX. formation from both parent sources is included also in the uthor, Biosystematic and CROSS indexes. The reprinted stracts may be referred to in the section entitled "Abstracts" here they are arranged in the same numerical order as in OLOGICAL ABSTRACTS. The Bibliography section conins material reprinted from BIORESEARCH INDEX. ote: Each issue contains abstracts from two consecutive ues of BIOLOGICAL ABSTRACTS and reference citations om one issue of BIORESEARCH INDEX.)

The Subject Index is compiled from significant words und in the author's title and the editorial addition of rtinent keywords. These words are positioned alphabetical- by computer so that additional subject words both ecede and follow the indexed word. However, since each lumn of title entries in the Subject Index is limited to 60 haracters" (letters and spaces per line), fragments of words ay appear at either end of the line.

A keyword, for purposes of machine programming, is a t of characters preceded and followed by a space. On this sis, certain terms traditionally written as one compound ord can be split into several elements, thereby providing ultiple, meaningful information entries. A space, separating rts of names, enables each entry to be indexed separately .g., chemosterilant becomes "chemo sterilant" and appears phabetically under "c" for "chemo" and under "s" for sterilant"). "Ribo nucleotides" and "deoxyribo nucleodes" would be ordered alphabetically under "r" and "d" d through a separation of elements both would appear nder "nucleotides," thus, visually emphasizing naturally lated terms. Conversely, organisms or terms commonly ritten as two or more words may be indexed as a unit by serting a hyphen between parts. *"Musca domestica"* is ritten *"Musca-domestica"* to prevent the separate entry nder *"domestica."*

Several modifying words help to locate pertinent ferences on the subject being searched. These modifying ords appear on both sides of the keyword for each of the stings.

For example, the title, "Nutritional Studies on Excesve Larval Molting in the Silkworm *Bombyx mori,*" would ppear alphabetically under the keywords: Nutritional, xcessive, Larval, Molting, Silkworm, *Bombyx-mori.* The odifying words would appear on both sides of the keyword r each of the listings.

xample:

index term — *abstract or reference #*

LKWORM BOMBYX-MORI/ NUTRITIONAL STUDIES ON EXCESSIVE LARVAL 52-11544

modifying phrase which precedes the index term in the author's title — *modifying phrase following the index term of the author's title*

To facilitate the search, nonsignificant words are not indexed (e.g., studies, on, in, the, etc.), whereas additional words are added editorially to supplement deficient titles. These keyword additions generally pertain to the organism (common and/or specific name), drugs and their affiliations, specific types of chemicals (e.g., pesticides, carcinogens, teratogens, etc.) and their affiliations, instrumentation, methodology, geographic location and other supplementary index terms where applicable.

Certain lengthy keywords, including chemicals and chemical and drug affiliations which frequently appear in the titles, are abbreviated in the Subject Index. Drugs are classified by their pharmacological effects and affiliated in abbreviated form according to the categories listed in the 17th edition of the United States Pharmacopeia. For an explanation and complete listing of all abbreviations used in the subject index, see the "Abbreviations for 1971 ABSTRACTS OF ENTOMOLOGY."

Example:

index term — *abstract or reference #*

ON HIND GUT OF PERIPLANETA-AMERICANA BY. WARFARIN METAB-DRUG 71-07521

modifying phrase — *specific drug affiliation*

Typographic Variations:

Computers printing out copy for the topical subject index are limited in variety of characters. There are no Greek letters, subscript or superscript numerals, symbols or punctuation marks. Consequently, the following adjustments and substitutions should be noted.

1. Chemical symbols, names of elements, radicals and compounds (with the exception of selected abbreviations such as DDT) are written out in full, as in "beta glucuronidase" for "β-glucuronidase" and "sodium chloride" for "NaCl."
2. Superscript or subscript numerals are hyphenated as "iodine-131" for "I^{131}"
3. A slash (/) indicates the end of the title and keywords and a period is used only to represent a decimal point.

Use:

An effective search method is to scan vertically the alphabetized topical Subject Index. When a significant word is found, glance at the nearby modifying words for further meaning and content. If interest is confirmed, note the abstract or reference citation number on the right and refer to the corresponding abstract or reference citation in the issue of ABSTRACTS OF ENTOMOLOGY.

In searching for abstracts or reference citations on a specific subject, it is useful to list alphabetically all possible terms (including synonyms and variants in spelling) which might apply to that subject. Vertical scanning of the index for these terms should yield pertinent abstract or reference citation numbers located in ABSTRACTS OF ENTOMOLOGY.

For a deeper search of the literature covered in ABSTRACTS OF ENTOMOLOGY, the Subject Index may be combined with CROSS and/or the Biosystematic Index. A suggested procedure for this type of search is presented in the instructions for the use of the CROSS Index, which precedes CROSS in each issue of ABSTRACTS OF ENTOMOLOGY.

ABBREVIATIONS FOR 1971 ABSTRACTS OF ENTOMOLOGY

(The "M," "D," "G," or "P" following a plant taxon or common name indicates monocotyledon, dicotyledon, gymnosperm or pteridophyte)

ACTH	adrenocorticotropic hormone
A. D. (with dates)	anno Domini
ADP	adenosine diphosphate
ADPASE	adenosine diphosphatase
A.M. (with time)	ante meridiem
AMP	adenosine monophosphate
AMPASE	adenosine monophosphatase
ANTI HIST-DRUG	anti histamine drug
ANTI INFECT-DRUG	anti infective drug
ANTI INFLAM-DRUG	anti inflammatory drug
ANTI PARASIT-DRUG	anti parasitic drug
ATP	adenosine triphosphate
ATPASE	adenosine triphosphatase
B.C. (with dates)	before Christ
BCG	bacille Calmette Guerin
BHC	benzene hexachloride; hexachlorocyclohexane
BTU	British thermal unit (following a number only)
CARBONIC ANHYDRASE INHIB-DRUG	carbonic anhydrase inhibitor drug
CARDIO VASC-DRUG	cardio vascular drug
CDP	cytidine diphosphate
CENT-DEPRESS-DRUG	central depressant drug
CENT-STIM-DRUG	central stimulant drug
CMP	cytidine monophosphate
CTP	cytidine triphosphate
2 4 D	2, 4-dichlorophenoxyacetic acid
DDD	dichlorodiphenyldichloroethane
DDE	dichlorodiphenyldichloroethylene
DDT	dichlorodiphenyltrichloroethane
DEAE cellulose	diethylaminoethyl cellulose
DERMATOL-DRUG	dermatologic drug
DFP	diisopropylphosphorofluoridate
DIAGNOS-DRUG	diagnostic drug
DNA	deoxyribonucleic acid
DNASE	deoxyribonuclease
DOPA	dihydroxyphenylalanine
DOPAMINE	dihydroxyphenethylamine
DPN	diphosphopyridine nucleotide (NAD)
DPNH	reduced diphosphopyridine nucleotide (NADH)
E	east (following a number only)
ECHO	enteric cytopathogenic human orphan (virus)
EDTA	ethylenediaminetetraacetate
EPR	electron paramagnetic resonance
F	forma (form; following a specific name only)
F-1, F-2	filial generations
FAD	flavine-adenine dinucleotide
FAO	Food and Agriculture Organization
FMN	flavine mononucleotide
GASTRO INTEST-DRUG	gastrointestinal drug
GDP	guanosine diphosphate
GMP	guanosine monophosphate
GMT	Greenwich Mean Time
GTP	guanosine triphosphate
HEMATOL-DRUG	hematologic drug
IAA	indoleacetic acid
IBA	indolebutyric acid
IDP	inosine diphosphate
IMMUNOL-DRUG	immunologic drug
IMP	inosine monophosphate
IR	infrared
ITP	inosine triphosphate
IU	international units
KEV	kiloelectron volt (following a number only)
KV	kilovolt (following a number only)
LD-50	lethal dose, median
LOG (LOG-10, LOG-E)	logarithm
M	morpha (form; following a specific name only)
METAB-DRUG	metabolic drug
MEV	million electron volt (following a number only)
MLD	minimum lethal dose
MV	millivolt (following a number only)
N	north (following a number only)
NE, NW	northeast, northwest
NAD	nicotinamide adenine dinucleotide
NADH	reduced nicotinamide adenine dinucleotide
NADP	nicotinamide adenine dinucleotide phosphate (TPN)
NADPH	reduced nicotinamide adenine dinucleotide phosphate
NATO	North Atlantic Treaty Organization
NMR	nuclear magnetic resonance
PH	log of the reciprocal of the hydrogen ion concentration
PHARM-ADJUNCT-DRUG	pharmaceutical-adjunct drug
P.M. (with time)	post meridiem
PPLO	pleuropneumonia-like organisms
Q-10	the change in the rate of a process when temperature is increased 10°C.
RAD	radiation, ionizing absorbed dose (100ergs/g of irradiated material)
RADIOPROTECT-DRUG	radioprotectorant drug
RES	reticuloendothelial system
R-F	retardation factor (i.e., distance the unknown has traveled relative to the solvent front in chromatography)
RNA	ribonucleic acid
RNASE	ribonuclease
S	south (following a number only)
SE, SW	southeast, southwest
SP, SPP	species (following a generic name only)
SSP, SSPP	subspecies (following a specific name only)
SV-40	vacuolating agent (papovavirus)
TDP	thymidine diphosphate
TEAE CELLULOSE	triethylaminoethyl cellulose
THIOTEPA	triethylenethiophosphoramide
TMP	thymidine monophosphate
TPN	triphosphopyridine nucleotide (NADP)
TPNH	reduced triphosphopyridine nucleotide
TTP	thymidine triphosphate
UDP	uridine diphosphate
UMP	uridine monophosphate
UNESCO	United Nations Educational Scientific and Cultural Organization
USA	United States of America
USP	United States Pharmacopeia
USSR	Union of Soviet Socialist Republics
UTP	uridine triphosphate
UV	ultraviolet
VAR	varietas (variety; following a specific name o
VOL	volume (for books only)
VS	versus
W	west (following a number only)
WHO	World Health Organization
XDP	xanthosine diphosphate
XMP	xanthosine monophosphate
XTP	xanthosine triphosphate

EXPLANATIONS OF ABBREVIATIONS USED IN BIOSYSTEMATIC INDEX

A mnemonic-type abbreviated term appears in the third column of the Biosystematic Index adjacent to each taxonomic entry. The abbreviation represents the subject heading under which the abstract or reference citation is assigned in BIOLOGICAL ABSTRACTS or BIORESEARCH INDEX and therefore indicates the type of study with which a particular taxonomic entry is concerned. Space-character requirements of the machine retrieval system used to compose and print the index make these abbreviations necessary. A complete listing of the abbreviated section headings is included for reference throughout the year. This listing will be revised and expanded when necessary and republished with each new volume.

CANTH EXPT	Invertebrate Morphology, Physiology and Pathology—Acanthocephala
CANTH SYST	Invertebrata, General and Systematic Zoology—Acanthocephala
CARINA SYST	Invertebrata, General and Systematic Zoology—Acarina
ERO ECO PSY	Aero-Space and Underwater Biological Effects—Ecology, Psychology
ERO ENG INS	Aero-Space and Underwater Biological Effects—Engineering, Instrumentation
ERO EXOBIOL	Aero-Space and Underwater Biological Effects—Exobiology
ERO GEN	Aero-Space and Underwater Biological Effects—General; Methods
ERO PHYSL	Aero-Space and Underwater Biological Effects—Physiology, Medicine
ERO RAD	Aero-Space and Underwater Biological Effects—Space Radiation
LGAE SYST	Botany, General and Systematic—Algae
LLERGY	Allergy
MP REP SYST	Chordata, General and Systematic Zoology—Amphibia, Reptilia
MPHIB SYST	Chordata, General and Systematic Zoology—Amphibia
N DISTRIB	Animal Distribution
N PROD BRED	Animal Production (includes Fur-Bearing Animals)—Breeds, Breeding
N PROD FEED	Animal Production (includes Fur-Bearing Animals)—Feeds, Feeding
N PROD GEN	Animal Production (includes Fur-Bearing Animals)—General; Methods
NAT COMPAR	Anatomy and Histology, General and Comparative—Comparative Anatomy
NAT EXPTL	Anatomy and Histology, General and Comparative—Experimental Anatomy
NAT GROSS	Anatomy and Histology, General and Comparative—Gross Anatomy
NAT MICRO	Anatomy and Histology, General and Comparative—Micro—, Ultramicroscopic
NAT REGEN	Anatomy and Histology, General and Comparative—Regeneration and Transplantation
NAT SURG	Anatomy and Histology, General and Comparative—Surgery
NAT RADIO	Anatomy and Histology, General and Comparative—Radiologic Anatomy
NGIOSP SYST	Botany, General and Systematic—Angiospermae
NNELID EXPT	Invertebrate Morphology, Physiology and Pathology—Annelida
NNELID SYST	Invertebrata, General and Systematic Zoology—Annelida
NTHROPOLOGY	Physical Anthropology: Ethnobiology
PP FIELD	Methods, Materials and Apparatus—Field Apparatus
PP LAB	Methods, Materials and Apparatus—Laboratory Apparatus
RACHNI SYST	Invertebrata, General and Systematic Zoology—Arachnida

CIRCAD RHYTH	Circadian Rhythm and Other Periodic Cycles
CNIDARI EXPT	Invertebrate Morphology, Physiology and Pathology—Cnidaria
CNIDARI SYST	Invertebrata, General and Systematic Zoology—Cnidaria
COLEOP SYST	Invertebrata, General and Systematic Zoology—Coleoptera
CONSERVATION	General Biology—Conservation, Resource Management
CROPS FIBER	Agronomy—Fiber Crops
CROPS FORAGE	Agronomy—Forage Crops, Fodder
CROPS GEN	Agronomy—Crops, General
CROPS GRAIN	Agronomy—Grain Crops
CROPS OIL	Agronomy--Oil Crops
CROPS SUGAR	Agronomy—Sugar Crops
CROPS TOBAC	Agronomy—Tobacco Crops
CRUSTAC EXPT	Invertebrate Morphology, Physiology and Pathology—Crustacea

CRUSTAC SYST	Invertebrata, General and Systematic Zoology—Crustacea
CRYPTOG SYST	Botany, General and Systematic—Cryptogamae
CTENOPH EXPT	Invertebrate Morphology, Physiology and Pathology—Ctenophora
CTENOPH SYST	Invertebrata, General and Systematic Zoology—Ctenophora

BIOSYSTEMATIC INDEX

The Biosystematic Index is composed of lists of taxonomic categories which are coordinated with specific subject headings and the abstract and reference citation numbers published in every issue of ABSTRACTS OF ENTOMOLOGY. The organism(s) studied in each paper is indexed to a specific taxonomic category. The abbreviated notation printed adjacent to the abstract or reference citation number represents the heading to which the abstract or reference citation has been assigned, thus, providing the user with additional information. (See "Explanations of Abbreviations Used in Biosystematic Index" which precedes this index). These abbreviations were derived to conform to the space-character requirements of the machine used to compose and print this index: i.e., GENET GEN (Genetics and Cytogenetics, General); FLOR DISTRIB (Floristics and Distribution); BEHAV CONDIT (Behavioral Biology-Conditioning). An asterisk (*) to the right of the abstract or reference citation number denotes one or more new taxa in the paper.

INSTRUCTIONS FOR USE:

Since the primary aim of the Biosystematic Index is to provide both a taxonomic entry for all the organisms mentioned in each paper as well as the primary field of interest being researched, the Index may be used by itself or in conjunction with one, or all of the other indexes.

Example:

If the reader is interested in studies on beetles, the simplest method is to search Biosystematic Index for entries under INSECTA-COLEOPTERA. The user should note the reference number and refer back to the actual abstract or reference citation.

[Taxonomic categories] *[specific subject headings]*

INSECTA	COLEOPTERA	AVES SYST	52-5805	
INSECTA	COLEOPTERA	COLEOP SYST	52-5527*	*[asterisks indicate new taxa]*
INSECTA	COLEOPTERA	COLEOP SYST	52-5528*	
INSECTA	COLEOPTERA	ENT BIO CONT	52-5374	
INSECTA	COLEOPTERA	ENT BIO CONT	52-5377	
INSECTA	COLEOPTERA	ENT BIO CONT	71-1094	
INSECTA	COLEOPTERA	ENT BIO CONT	71-2279	
INSECTA	COLEOPTERA	ENT BIO CONT	71-2280	
INSECTA	COLEOPTERA	ENT BIO CONT	71-4781	*[reference numbers]*
INSECTA	COLEOPTERA	ENT CHEM CONT	52-5385	
INSECTA	COLEOPTERA	ENT CHEM CONT	52-5390	
INSECTA	COLEOPTERA	ENT CHEM CONT	52-5396	

Alternately, if the researcher is interested in Coleoptera used within a specific field of study, i.e., the *effective control of beetles*, the best approach is to scan the "Abbreviations Used in Biosystematic Index," which precedes the Biosystematic Index in each issue of ABSTRACTS OF ENTOMOLOGY, checking for the abbreviation of subject headings and subheadings which most clearly approach the user's specific area of research. Using the example presented above, *the effective control of beetles*, the following subject headings and subheadings are selected as suitable:

Economic Entomology (includes Chelicerata) –
Biological Control = ENT BIO CONT

Economic Entomology (includes Chelicerata) –
Chemical and Physical Control, General; Apparatus = ENT CHEM CONT

A check of the COLEOPTERA entries in the Biosystematic Index reveals nine references, (52-5374, 52-5377, 71-1094, 71-2279, 71-2280, 71-4781, 52-5385, 52-5390, 52-5396) whose primary field of study is one of the selected abbreviated headings and subheadings listed above. Thus, by using one index, the taxonomically-oriented user can effectively search the material published in ABSTRACTS OF ENTOMOLOGY.

Combining Biosystematic Index with CROSS Index

A more intensive search of the literature published in ABSTRACTS OF ENTOMOLOGY can be accomplished by combining the taxonomic groupings in the Biosystematic Index with the subject headings of CROSS. For further information and a suggested procedure, see the "Instructions For Use of CROSS Index" which precedes the CROSS Index.

Combining Biosystematic, CROSS and Subject Indexes

Often, deep searches in relatively obscure fields of study require a highly sophisticated retrieval system. By combining the Biosystematic (for taxonomy), the CROSS (for subject headings) and the Subject indexes (for specific keywords), the researcher can retrieve all abstracts and reference citations pertinent to any field of study published in ABSTRACTS OF ENTOMOLOGY. For further information and a suggested procedure, see the "Combination of Indexes with the Subject Index" under the "Instructions for Use of CROSS Index."

THE CROSS INDEX

DEFINITION AND PURPOSE: The CROSS (Computer Rearrangement of Subject Specialties) Index lists nearly 600 section headings and subheadings of biological and biomedical interest to which the major concepts, mentioned in the research article, relate. Since the primary aim of CROSS is to coordinate (cross relate) all references in ABSTRACTS OF ENTOMOLOGY which are specifically or generally pertinent to a particular subject, CROSS may be used to select references which are related to any number of subject headings.

ARRANGEMENT: The CROSS Index contains the numbers of all abstracts and reference citations appearing in ABSTRACTS OF ENTOMOLOGY. These references are numerically arranged under major subject headings or subheadings. When a given abstract or reference number relates to several subjects, it will appear under as many headings or subheadings as are necessary to index that abstract or reference properly.

For convenience in searches, the major subject headings and their respective subheadings are alphabetized with the reference numbers arranged in six vertical columns beneath these headings. The prefix numbers 52 and 71 indicate references from BIOLOGICAL ABSTRACTS and BIORESEARCH INDEX, respectively.

Example: Sample heading as it appears in the CROSS Index:

[alphabetized major subject heading–subheading]

INSTRUCTIONS FOR USE: References located under a given CROSS heading may be compared with those under one or more other headings. The selection of identical reference numbers appearing under more than one subject heading would result in the retrieval of references relative to the several headings.

Example:

When the reader desires all references concerned with *insect heart response to cardio-accelerators,* the search method is as follows:

1. Scan the "Alphabetical Listing of Subject Headings Which Appear in the CROSS Index." This section precedes the actual index.
2. Determine the specific subject headings which are relevant to the study being searched (i.e., those factors which are absolutely necessary to obtain the information desired). In the following example, the most pertinent subject headings are:

   Cardiovascular System–Physiology and Biochemistry
   Invertebrate, Comparative and Experimental Morphology, Physiology and Pathology–Insect Physiology
   Pharmacology–Cardiovascular System

3. To facilitate the search, start with the subject heading which contains the least number of entries. Match the reference numbers listed under this subject heading against the other specific headings which have been selected. In the example given, the subject heading with the least number of entries is "Pharmacology–Cardiovascular System." Compare these numbers with those of "Cardiovascular System–Physiology and Biochemistry." The reference numbers retrieved from this correlation are checked against those of "Invertebrate, Comparative and Experimental Morphology, Physiology and Pathology–Insect Physiology." The reference numbers which match– **52-064333**, **52-064381**, **52-065175**, **71-044821** and **71-046005**–contain information relevant to the subject under study (i.e., pertain to all three subject headings).

[arrows indicate those reference numbers
which appear under all of the
preselected subject headings]

4. By selecting only those reference numbers which appear under each subject heading, the searcher is assured of retrieving only those references which are precisely concerned with the subject being investigated. In the case of hypothetical example being discussed, the searcher would retrieve all abstracts specifically related to *insect heart response to cardio-accelerators.*

COMBINING CROSS INDEX WITH BIOSYSTEMATIC INDEX

A more intensive search of the materials published in ABSTRACTS OF ENTOMOLOGY can be undertaken by using the taxonomic groupings in the Biosystematic Index, which directly precede the CROSS Index in each issue of ABSTRACTS OF ENTOMOLOGY. For example, if the reader desires to narrow the search to a specific taxonomic group, e.g., ORTHOPTERA, this search could be accomplished quickly and easily by turning to the Biosystematic Index and checking reference numbers listed under INSECTA-ORTHOPTERA against those reference numbers previously obtained from searching the CROSS Index. The reference numbers that appear under both INSECTA-ORTHOPTERA in the Biosystematic Index and under the pertinent subject headings under CROSS will contain the precise factors sought (i.e., *cockroach heart response to cardio-accelerators.)*

Suggested Procedure:

1. List the reference numbers retrieved from the CROSS Index and compare them with the reference numbers listed under INSECTA-ORTHOPTERA in the Biosystematic Index.

2. Check the reference numbers which appear under both the pertinent subject headings in the CROSS Index and under INSECTA-ORTHOPTERA in the Biosystematic Index.

3. Disregard those reference numbers which do not appear in both the CROSS and Biosystematic Index.

Example: BIOSYSTEMATIC INDEX

[arrows indicate those reference numbers which appear under the Biosystematic Index and also under all the subject headings searched in CROSS]

[asterisks indicate new taxa]

The reference numbers retrieved from the CROSS INDEX were:

52-064333
52-064381
52-065175
71-044821
71-046005

Because the reference numbers **52-065175** and **71-044821** are not indexed under the taxonomic group INSECTA-ORTHOPTERA, they should be disregarded.

4. The reference numbers which remain (i.e., **71-046005**, **52-064333** and **52-064381**) should contain the information the user desires.

COMBINATION OF INDEXES WITH THE SUBJECT INDEX

Still greater usefulness of ABSTRACTS OF ENTOMOLOGY can be achieved by using the CROSS Index in combination with the Biosystematic and Subject indexes. A combination of selected key-terms from the Subject Index with specific subject headings in CROSS may be used to locate information on various interrelated subjects.

Suggested procedure:

1. List all the potential, significant keywords to be searched in the Subject Index and the appropriate subject headings to be searched in CROSS Index.
2. Search the Subject Index for these preselected key-terms and scan the adjacent, modifying terms for further meaning and content. If interest is confirmed, note the reference number to the right.
3. Check each of the preselected subject headings under the CROSS Index.
4. By referring only to those reference numbers which appear under all of the preselected subject headings in CROSS and which follow significant key-words in the Subject Index, the researcher will obtain information specifically concerned with his field of study.

If the study emphasizes specific organisms, the researcher may turn to the taxonomic groupings in the Biosystematic Index which will lead to reference numbers pertaining to organisms which may be of interest in specific applications. These specific applications or fields of interest can be selected by comparing the reference numbers under the Biosystematic Index with those appearing under appropriate section or subsection headings in CROSS, and with those listed following selected, alphabetically indexed keywords in the Subject Index. By using only those reference numbers which appear in all three indexes, the search is progressively narrowed to specific papers pertinent to the defined interest of the searcher.
